

CS 354: Activity A04 – Memory Diagram

Your cslogin: xvming

Draw a memory diagram of the following code fragment. Use a rectangle for each memory location that is allocated. Label each allocation with its type, name, and value (if known). Use arrows to indicate contents that point to known locations, and use ? if the value is not known.

Show all the memory allocated and in which memory segment it is allocated. Complete on paper or computer, save as a PDF, and copy to your activities handin directory.

You must diagram memory to get credit showing what memory is allocated, where it is allocated, and the values if known. Your diagram does not have to be completely correct to get full credit. You may discuss and work with classmates, but do not post or share your solution anywhere online or on Piazza.

Complete and save as diagram04.pdf. Place a copy in your handin directory:
/p/course/cs354/handin/202509/activities/<CSLOGIN>/diagram04.pdf

```
int array3[3] = {1,2,3};
int array2[2] = {4,5};
int array1[1] = {6};
int *arrays[] = {array3,array2,array1};
```

* Assume descending address in x86-64 memory
